REASONS FOR ALLOWANCE

10. The following is an examiner's statement of reasons for allowance:

The instant invention is generally relates to color image processing with methods and apparatus for electronically trapping digital color images to minimize image artifacts caused by mechanical registration errors in multiple separation color image devices.

With regard to Claim 1, the closest prior arts of record, Morgana (U.S. Patent No. 6,377,711) and Geurts et al. (U.S. Patent No. 2001/0055130), do not disclose or suggest, among the other limitations, the additional required limitation of *"adjusting, with the computer, the trigger values according to the distance between the first pixel and each surrounding pixel to obtain a distance adjusted trigger value for each of the surrounding pixels; comparing, with the computer, the adjusted trigger values for each of the surrounding pixels to a trigger threshold; identifying, with a computer, any of the surrounding pixels where the adjusted trigger value for the surrounding pixel exceeds the trigger threshold; identifying, with the computer, a trigger pixel from the surrounding pixels with the adjusted trigger value that exceeds the trigger threshold with a maximum trigger value ... "*. These additional features in combination with all the other features required in the claimed invention are neither taught nor suggested by Morgana and Geurts et al.

With regard to Claims 2-3 and 8-10, the claims are depending directly or indirectly from the independent Claim 1, each encompasses the required limitations recited in the independent claim discussed above.

With regard to Claim 30, the closest prior arts of record, Morgana (U.S. Patent No. 6,377,711) and Geurts et al. (U.S. Patent No. 2001/0055130), do not disclose or suggest, among the other limitations, the additional required limitation of “*means for adjusting the trigger values according to the distance between the first pixel and each surrounding pixel to obtain a distance adjusted trigger value for each of the surrounding pixels; means for comparing the adjusted trigger values for each of the surrounding pixels to a trigger threshold; means for identifying any of the surrounding pixels where the adjusted trigger value for the pixel exceeds the trigger threshold; means for identifying a trigger pixel from the surrounding pixels with the adjusted trigger value that exceeds the trigger threshold with a maximum colorant difference value ...*”. These additional features in combination with all the other features required in the claimed invention are neither taught nor suggested by Morgana and Geurts et al.

With regard to Claims 31-32 and 37-39, the claims are depending directly or indirectly from the independent Claim 30, each encompasses the required limitations recited in the independent claim discussed above.

11. Therefore, Claims No. 1-3, 8-10, 30-32 and 37-39 are allowed.
12. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled “Comments on Statement of Reasons for Allowance.”
